

Connected data and resource management platform

PTx FarmENGAGE is the next generation of farm operations management software built to bring simplicity, connectivity, and control to your entire fleet, no matter what equipment brands you use. The FarmENGAGE—Data license is for farmers who need to efficiently manage field resources and precision ag data to keep their operators running, ensure field work is completed correctly, and leverage that data for reporting, record keeping or agronomic analysis.

Designed to help farmers take control of their precision ag data across a mixed fleet of equipment, FarmENGAGE—Data simplifies information transfer between the office and in-cab displays, tracks equipment use and job progress, and automates the collection and sharing of as-applied records. Set up is fast and smoothly integrates with your existing processes and other third-party farm management platforms, including Fendt, Massey Ferguson, Valtra, John Deere, Raven, Case IH, New Holland, and more. The intuitive user experience makes it easy to view resources and move data where it needs to go.

FarmENGAGE—Data leverages Field Manager to create, manage and send resources for field work from anywhere, giving you the ability to work ahead of operators in the field. Field Manager allows web users to create, edit, import, export, send to displays, retire, unretire, search, and filter boundaries, guidance lines, landmarks, prescriptions and crop zones.

Getting operators the resources they need when they get to the field improves fieldwork quality and outcomes while also reducing the chance and cost of operator errors. Using the Direct Send feature allows you to select the specific resources you would like to send to each individual Precision-IQ display or AGCO factory-fit terminal in your fleet, eliminating the need to manually move data with USB drives. This simplified syncing feature delivers the exact resources needed to perform the desired activity to the vehicle, without impacting (or syncing to) other displays and operators

Key Benefits

- Increase in-field work time and reduce operator error by sending resources directly to displays in the field
- Save time every day with automatic collection and cloud upload of as-applied data for recordkeeping and agronomic analysis
- Connect your data directly to most third-party farm management platforms in the market, including Fendt, Massey Ferguson, Valtra, John Deere, Raven, Case IH, New Holland, and more.

FarmENGAGE—DATA

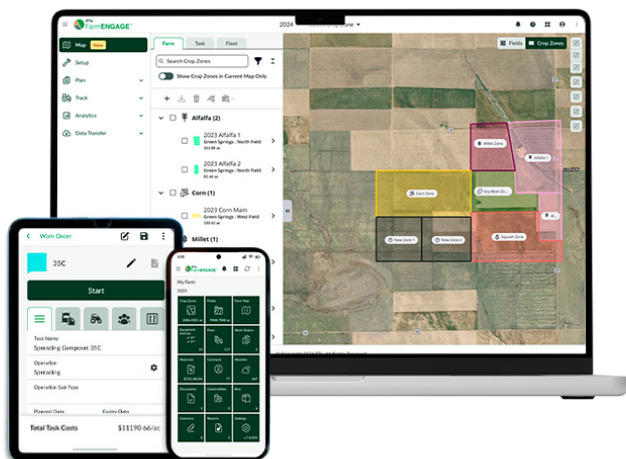

Connected data and resource management platform

running in the field. Variable rate prescriptions can also be imported and delivered to displays and terminal with Direct Send and FarmENGAGE—Data.

Finally, farm managers can stay on top of operations in the field as they happen with on-demand status information, and keep up with data collection and reporting tasks with enhanced equipment activity reports. Report generation is as easy as selecting the completed field operations from a list.

Key Features

- Field Manager for creation of fields, boundaries, guidance lines and more
- Direct Send resource sharing
- Prescription importing and sending
- Live vehicle activity
- Automated reports with all task details and map layers
- Automatic task data collection from all connected displays
